

Sahayak AI

Private Hindi document guidance
designed for Snapdragon HP PCs

Snapdragon AI Lab Build and Present Challenge

The document comprehension gap

Formal notices, bills, forms, and medical reports often leave people unsure about the next step.

Privacy risk

Personal documents may contain health, financial, or identity information that users should not have to upload to the cloud.

Language barrier

Official wording can be difficult to read, especially when a user needs a clear Hindi explanation.

Connectivity barrier

Cloud-only tools become less useful when users have limited or unreliable internet access.

Sahayak AI

A local assistant that turns important documents into clear Hindi guidance.

Upload or photograph a document. Sahayak AI reads it locally, explains it in simple Hindi, highlights dates and amounts, and answers follow-up questions by voice.

“Mujhe kya karna hai?”

A short summary, action list, and Hindi voice response

Sensitive content stays on the PC

User experience

1

Add a document

Upload a PDF or capture a photo with the laptop camera.

2

Understand content

Local models identify the document type and the relevant information.

3

Explain in Hindi

The app returns a short explanation, important details, and next actions.

4

Ask by voice

Ask a question in Hindi about the document.

5

Receive a private answer

A local response explains the answer without sending the document to a cloud service.

On-device AI architecture

Input

PDF, image, or camera capture

Document understanding

OCR and a vision-language model identify content and context.

Hindi guidance

A compact local LLM writes the summary and action list.

Voice interaction

Local Whisper speech recognition supports follow-up questions.

Qualcomm AI Hub provides optimized, validated models for vision, speech, audio, and text. Snapdragon X hardware enables local inference through its dedicated NPU, GPU, and CPU.

Planned models: InternVL 3.5 for document understanding, Qwen for Hindi reasoning, and Whisper for speech-to-text.

Hackathon prototype and impact

Live demo

A user uploads a Hindi or English notice. Sahayak AI shows a Hindi summary, extracts a deadline and amount when present, creates an action list, and answers one spoken question.

Who it helps

Students reading scholarship notices, families understanding bills, patients preparing questions, and citizens responding to official letters.

What makes it different

Hindi-first guidance with an on-device privacy design and a clear Snapdragon NPU optimization path.
